

MedEase

Smarter Care, Made Easy

Group 03:

Ariful Islam Mohsin (2212069042)

Liana Shams (2322801042)

Rashedul Islam (1821785042)

PROBLEM BACKGROUND: THE CHALLENGE OF FRAGMENTED HEALTHCARE

Inaccessible Blood Donation Logistics

Limited donor information and the absence of a central tracking system makes it hard to find suitable donors in emergencies.

Inefficient Appointment Booking

Reliance on manual processes for scheduling appointments creates delays, frustration, and reduces accessibility for patients.

Fragmented Health Records

Patient data is often scattered across various physical and digital formats, leading to inefficiencies and potential miscommunication.

MEDEASE PROJECT GOALS

Primary Purpose

Design and develop a single digital health platform for secure, seamless access to personal and community healthcare services.

Core Goals

- **Unification:** Centralize critical tasks (appointments, health records, blood donations).
- **Accessibility:** Cross-platform deployment (Android, iOS, Web, macOS).
- **Security:** Implement robust authentication to safeguard sensitive data.
- **Functionality:** Deliver key features like Blood Donation system, Centralised Health Records, Online Doctor Appointment and AI Consultation.

MEDEASE VS. TRADITIONAL SYSTEMS

Aspect	Traditional System	MedEase Approach
Scope	Single Service Focus (e.g., Booking only, or Records only).	Unified platform for multiple core health services.
Platforms	Limited to specific devices or Operating System	Cross-platform (Android, iOS, Web, macOS) from a single codebase.
Records	Paper-based or scattered digital files systems.	Centralised, secure digital repository for all health documents.
Initial Consult	Requires direct doctor visits or phone calls.	Instant, AI-powered initial consultation and symptom understanding

MedEase provides a comprehensive solution, eliminating the need for multiple, specialised applications and enhancing overall efficiency.

METHODOLOGY AND TECH STACK

Agile Development

Executed iteratively, allowing for flexibility and continuous improvement throughout the project lifecycle.

Multi-Platform Strategy

Simultaneous deployment across Mobile (Android, iOS) and Desktop/Web (macOS, Web).

INTRODUCING MEDEASE

MedEase is an all-in-one digital health companion that unifies essential services, including appointments, secure health records, and blood donation logistics, into a single, easy-to-use platform.

KEY FEATURES OF MEDEASE

1. Secure Login and Authentication

The app supports:

- Signup
- Log in with Google
- Log in with Email

ensuring user identity protection
and data privacy

KEY FEATURES OF MEDEASE

2. Blood Donation Management

Enables users to:

- Sign up as a donor
- Find donation centers
- Check eligibility requirements
- View upcoming blood campaigns/drives.

KEY FEATURES OF MEDEASE

3. Doctor Appointment Booking

Enables users to:

- View available doctors
- Check slots
- Easily book appointments
- Have a centralized list of all upcoming appointments

KEY FEATURES OF MEDEASE

4. Centralized Health Records

Allows users to:

- Upload health record documents (e.g., prescriptions, test results)
- Securely store all documents in one place.

KEY FEATURES OF MEDEASE

5. AI Consultation Service

Users can engage in natural language conversations to seek initial advice, understand general symptoms, or learn about basic health and wellness topics.
